Attach Document modal: "browse" link does not open file selection dialog

QA REPORT

Reported via annotated screenshot. No existing ticket found for this issue.

Screen: Attach Document upload modal/dropzone

URL: Not visible in screenshot

ISSUE

Clicking the "browse" link in the Attach Document dropzone does not open the OS file-selection dialog, so a user cannot pick a file this way — only drag-and-drop appears to work.

LOCATION

The "browse" link/button within the "Drag and drop your file or browse." dropzone copy.

PROPOSED FIX

Confirm the "browse" link is wired to trigger the hidden file `<input>`'s click (or equivalent), and that the click handler isn't being blocked or unbound.

EXPECTED RESULT

Clicking "browse" opens the native file selection dialog, letting the user choose a file to upload the same way drag-and-drop does.
