

Design Refinement

CHEAT SHEET

Inputs:

- Refined context scenarios
- Up-to-date domain model
- Design hypothesis

Goals:

- Give feedback on UI/UX design
- Refine UI/UX design direction
- Make sure workflows represented are accurate

Outputs:

- Approved UI/UX design
- Priorities for different aspects of the workflows

Questions to ask yourself:

- Does the design support the context scenarios?
- Is previous feedback incorporated or explored?
- Does the design match the value the context scenario provides?
- Will the design work for the personas it supports?

Try to avoid:

- Design by committee – Creating design solutions in the meeting
- Technical implementation details
- Steering discussion away from the current workflow
- Designing for yourself – keep the personas in mind

Where are we in the pipeline?
