

# Technical Refinement

## CHEAT SHEET

### Inputs:

- Approved UI/UX designs
- Functional user stories

### Goals:

- Discuss technical solutions
- Estimate stories

### Outputs:

- Estimated stories
- Technical notes documented in stories
- Implementation hypothesis documented in stories
- Sprintable stories

### Questions to ask yourself:

- How might I go about developing a solution?
- Do I have the definition I need to complete the work?
- Do I understand the value this work provides?
- Should the work be broken down into more stories?

### Try to avoid:

- Questioning whether the current feature is something that users really want
- Over-focusing on hypothetical future implications when looking at a single story (getting off in the weeds)

### Where are we in the pipeline?
